

July 14, 2025

Dear Valued Customer,

With rapid advancements in technology, STERIS continues to advance our Liquid Chemical Sterilization technology platforms to shape best practice standards and provide products to the marketplace that prioritize patient safety.

Therefore, STERIS will be discontinuing sales of the SYSTEM 1 EXPRESS processor. The final date to place an order for the SYSTEM 1 EXPRESS processor is **September 30, 2025**.

We understand the impact this may have and remain committed to supporting our Customers. For current SYSTEM 1 EXPRESS Customers, you will still be able to purchase the S40® Sterilant Concentrate, Quick Connects, and processing trays. Service parts will continue to remain available, subject to availability.

As an alternative, we recommend the **enspire 3000 Cleaning and Liquid Chemical Sterilant Processing System**, which delivers a comprehensive suite of advanced features and operational benefits that surpass those offered by SYSTEM 1 EXPRESS. The enspire 3000 is engineered to enhance workflow efficiency, reduce risk of infections, and support compliance with the latest regulatory standards, making it an ideal choice for facilities seeking to optimize their reprocessing capabilities.

For questions or to explore alternative products, please contact your local STERIS representative.

Sincerely,

A handwritten signature in black ink, appearing to read "M McGrath", written in a cursive style.
